25X1

management. Workers consisted of Bulgarians The ground is completely dry through draining. Possible existing surface water flows naturally into the stream flowing from Tsarimir at the south side of the airfield.

25X1

Take-off Runways and Taxiways

5. A concrete runway is located approximately in the middle of the airfield. The runway runs 150 meters from the north to the south side of the airfield (sic), is approximately 50 meters wide and is kept in excellent condition. An elliptical shaped concrete taxiway runs around the entire airfield this is 18 meters wide. A concrete taxiway strip about

25X1

this is 18 meters wide. A concrete taxiway strip about 20 meters in width connects the main take-off runway at the point where the main take-off runway connects with the elliptical taxiway. The taxi strip leads to the buildings located in the southeast corner of the airfield.

6. From the west side of the airfield two packed earth taxiways lead to the main take-off runway. The taxiway (shown as Figure 4a on Appendix A) is approximately 150 meters from the southwest corner, near the stream. The taxiway (shown as Figure 4b on Appendix A) is approximately 450 meters from the northwest corner of the airfield. At present, extension work is not being conducted. The workers customarily employed for the leveling work at the airfield are of Bulgarian nationality.

25X1

Buildings

- 7. The airfield commandant is housed in a building in the southeast corner of the airfield (see Figure 9). This building has one story and a flat roof.
- 8. The first hangar lies to the south, approximately 90 meters west of the commandant building. Additional hangars are located east of and starting 100 meters from the first hangar. There are four hangars of steel and reinforced concrete construction. Each of these hangars is approximately 35 x 70 meters in size with a corrugated sheet iron roof and steel sliding doors which have sliding hinges. All of these hangars are painted.
- 9. A tower is located between the second and third hangars (see Figure F of Appendix A). The tower, approximately 30 meters high, is of stone and concrete. At the top of this tower, an antenna is set up. There are screens on the top of the tower which resemble the shell of a listening device but which are concave and must belong to the blind flying equipment of the airfield. These screens are circular and the diameter of each such screen is 1.5 meters. Fifty meters west of the hangars there is a stone building. The airfield guard is lodged in this building (see Figure 8 of Appendix A).
- 10. A barracks compound is located at the airfield (see Figure 11 of Appendix A) 180 meters southeast of the airfield. This barracks compound is 180 meters south of the hangars and comprises an area of approximately 500 x 300 meters. This barracks compound consists of eight 1-story buildings, a workshop building, and four garages and warehouses.

Radar, Radio and Meteorological Station

ll. The airfield has two permanent ultra shortwave radio broadcasting stations. One station is in the tower (shown as Figure 7), and the other station is in the commandant's building in the barracks compound (Figure 11). This radio station in the barracks compound is allegedly for the exclusive use of the Soviets who are at the airfield.

12.	repeatedly seen two mobile radar stations on the airfield which are mounted on motor trucks. These mobile stations were serviced by Bulgarian soldiers, each under the direction of a Bulgarian officer stationed at the airfield. They took positions at different points of the airfield, usually in the northwest corner and somewhat south from there.	25X1
13.	airfield at the Pikla stream. This station is lodged in a commandeered large farm house.	
14.	There is a central fuel oil depot (see Figure 12). This central fuel oil depot is lodged in the southeast corner of the barracks compound. there are eight gasoline tanks, each estimated at about 10 meters long and three meters wide, lying horizontally, which are at the surface of the earth but protected with an earth mound approximately four meters high. This earth mound over the tanks is planted with bushes.	25 X 1
15.	From this central fuel depot, existing pipes run off under steady pressure and are located at the main take-off runway and at different places on the taxiways for fueling purposes these are closed with a metal cap which can at any time be removed. An exact sketch of these refueling points can not be reproduced.	25X1
16.	zigzag ditches were located in the northwest corner and in the southwest corner of the airfield (Figure 13). In these ditches metal drums are stored in which reserve fuel oil is stored. Lubricating oil also must be kept in these drums.	25X1
17.	and a second	25X1
18.	Power Supply The power supply is brought on an overhead line from Plovdiv across Graf Ignatiev and is further led from Graf Ignatiev by underground cable to the airfield.	
	Road and Rail Connections	
19.	Road connection starts from the Plovdiv-Kalofer road to the southeast corner of the airfield and runs parallel with the south side of the airfield to the stream that also partly forms the boundary of the south flank of the airfield.	
20.	There is an industrial railroad line that branches off halfway between the southeast corner of the airfield and the stream and that comes from the direction of Tsarimir and leads to the first half of the south side of the barracks compound (Figure 11). An L-shaped ramp is located here.	
	Wind Direction	
21.	the main wind direction is northeast-southwest.	25 X 1

- 11 -

25X1

Antiaircraft Batteries

22. No details known.

Aircraft Hardstands

23. At the west side of the airfield there are three groups of aircraft hardstands. The first group is probably 150 meters from the northwest corner of the airfield (see Figure 5). The other groups follow at a distance of about 500 meters. A counting of the individual aircraft hardstands has not been possible. However, it has been determined that each individual aircraft hardstand is separated from its neighbor by an earth mound.

Fencing

24. None. Warning signs.

Garrison

a Soviet instruction staff has a strength of 100 men. This instruction staff is distributed among the Bulgarian units. In addition, there is also a Soviet advisory staff on the airfield, consisting of flight and technical officers.

number of the instruction staff consists of Bulgarians who have lived in the USSR for a long time and received their education there.

26. No details are available concerning Bulgarian units stationed at the airfield.

Aircraft

27. Thirty Soviet MIG-15s which carried the Bulgarian national insignia on their wings and fuselage were observed at the airfield. At the time of the observation 39 IL-10s were seen.

25X1

Activities

28. Flying occurred from early morning until evening. Flight training was carried out and consisted of single take-offs and landings, take-offs and landings in pairs, formation flying, etc.
